

Environmental Policy Statement

Established since 1982, Wan Chung Construction Co., Ltd. has provided building construction, interior design fitting-out and property maintenance services to the Government and private sector nearly 39 years. The scope of our works is the construction of buildings, Construction of civil engineering works (site formation), design and building activities to keep, restore and improve the facilities of buildings and surroundings. They also apply to our operation including activities, products, services or purchases within offices and / or construction sites.

Environmental protection is a management responsibility to which WAN CHUNG has a strong commitment to complying with legal requirements and with other requirements, including customer satisfaction and expectation to which WAN CHUNG subscribes which relate to its organization context, interested parties needs and expectation, risk and opportunity, environmental aspects, prevention of pollution and resources saving. Our environmental management system is focused on continual improvement to enhance environmental performance in Source Reduction, Recycling / Reuse, Control, Disposal to making the earth polluted as little as possible and Sustainable Resource Use to demand more sustainable in the way we use resources. The following principals are basic to achieving the objective:

- Source Reduction** : To consider a priority in overall planning, design, use and development of environmental friendly products and processes.
- Recycling / Reuse** : To encourage and develop modes of recycling/reuse which recover a useable material from waste material or reuse a waste for beneficial purposes.
- Control** : To save resources, save energy, reduce overall emissions and waste generation.
- Disposal** : To dispose/discharge in proper manner if employed to the greatest extent possible.
- Sustainable Resource Use** : To prevent and reduce waste, being more efficient in the way we use resources and using more renewable resources.
- Continual Improvement** : To establish and periodic review of measurable goals and actual performance against the goals.

The Safety, Health and Environmental Management Committee is in overall policymaking, organizing, planning, implementing, measuring performance as well as review on all environment-related matters. Each project has to program for the execution of protective measures and sustainable resource use. And environmental protection practices and compliance are everyone's responsibility. WAN CHUNG wishes to educate, train and motivate employees to conduct their operations in an environmentally responsible manner and encourages suggestions from them for improvements in the field of environmental protection.

The policy statement and any revision shall be brought to the notice of everyone working for or on behalf of WAN CHUNG by training and by posted it up. This policy statement shall be reviewed annually.
